

## What is the FilmLook® Option?

The FilmLook feature includes a license of the FilmLook® patented technology.

According to FilmLook and its licensed patent, this feature permits the opportunity to create a non-linear light response that will approximate the response curve of film when the camera's output signal is observed on a video monitor, while the camera outputs 1080sF23.98 and 1080sF24 signals.

## What camera models have FilmLook?

The CCU-RH1F-STD does not include FilmLook.

The CCU-RH1F-FL has the FilmLook option installed.

The CCU-Studio2K has the FilmLook option installed.

## What menu settings do I use for FilmLook?

FilmLook has suggested that the following menu settings\* generate a curve that approximates the response of film when viewed on a video monitor:

GAMMA	
MODE:	ON
TABLE:	USER
USER POWER:	0.55
BLACK GAMMA:	ON
- RANGE:	35%
- LEVEL:	-10
KNEE MODE:	
- POINT:	95
- SLOPE:	5

Note that these settings are for a VIDEO OUT, such as a made-for-TV movie, as the intent is for viewing on a video monitor.

For information about FilmLook and how to best use of the FilmLook feature, FilmLook can be contacted at (818) 845-9200, or [www.filmlook.com](http://www.filmlook.com)

\*Iconix strongly recommends testing camera settings before using in an actual production situation. As each production is unique, Iconix does not recommend, prescribe, or endorse any camera settings for any given use or application.

## What if I don't purchase the FilmLook option on the HD-RH1F?

When a CCU-RH1F-STD model is set to 1080sF23.98 or 1080sF24, the Gamma feature cannot be fully adjusted. Note that all Gamma features are fully functional in all other formats and frame rates.

The following limitations on the Gamma settings are in effect when the camera is set to output 1080sF23.98 or 1080sF24 (**only**):

### GAMMA

ON/OFF:	Fully functional
TABLE:	Fixed to ITU-709
USER POWER:	Inactive, as TABLE cannot be set to USER
BLACK GAMMA:	Fixed to OFF
- RANGE:	Inactive, as BLACK GAMMA is fixed to OFF
- LEVEL:	Inactive, as BLACK GAMMA is fixed to OFF
