

DIVEBAG

DiveBag is an economic solution to enable a Polecam to operate a few centimetres underwater*. A two piece latex rubber housing that fits over a standard Polecam head with full 360 degree pan capability and virtually unrestricted movement.

Live transmission air-water-air shots are easily realised making DiveBag ideal for unique shots especially for Sports and Natural History.

* For a completely submersible camera housing we recommend our FishFace unit.

DiveBag used at:

Bournemouth Oceanarium - shark & turtle feeding

QVC - Rays in the Bahamas

Iceland - salmon fishing

Let your imagination continue to wander at what shots Polecam can give you . . .

features

- Two piece latex rubber housing supplied ready to fit over a standard Polecam head
- Pan & tilt movement similar to standard Polecam head though slightly restricted from the normal range
- Tempered glass marine port 34mm diameter accomodates Fuji TF lenses
- Incorporates Divebag support plate / camera mount
- Accommodates standard Polecam cameras. i.e. Toshiba and Iconix remote head HD and SD cameras
- Lightweight, user friendly and quick to use
- Less obtrusive than using a large crane
- No diver required therefore doesn't disturb filming environment
- Additional accessories include Rain-X for the marine port
- Depth capability: 100mm (4 inches) ONLY
- Weight : Only 360 grammes
- Dimensions : Fits comfortably and adapts to a standard Polecam head
